Table of Contents

Chapter 1 Introduction and Outline 1

Chapter 2 Background 5

2.1 Terminology 5

2.2 End-to-End Error Recovery with TCP 9

2.2.1 Basic Operation 9
2.2.2 TCP-Lite's Retransmission Timer 12
2.2.3 TCP/IP Header Compression 14

2.3 End-to-End Congestion Control in the Internet 16

2.3.1 Objectives and Principles 16
2.3.2 Congestion Control in TCP 18
2.3.3 New Developments 20

2.4 Link Layer Error Control in Wireless Networks 23

2.4.1 Circuit-Switched Data Transmission in GSM 24
2.4.2 Handover Control 26
2.4.3 Link Layer Error Recovery 27
2.4.4 Forward Error Correction and Interleaving 28

2.5 The Problem: Inefficient Cross-Layer Interactions 29

2.5.1 Underestimation of the Available Bandwidth 30
2.5.2 Inefficiency of End-to-End Error Control 31
2.5.3 Overly Strong Link Layer Error Control 32
2.5.4 Competing Error Recovery 34
2.5.5 Failure of Link Layer Differential Encodings 35

2.6 Related Work 36

2.6.1 Classification of Existing Approaches 37
2.6.2 Evaluation 40

2.7 Brief Motivation and Outline of our Approach 42

Chapter 3 Analysis Methodology 45

3.1 Evaluating Error Recovery Strategies 46
3.1.1 Collecting Link Layer Traces in GSM-CSD 46
3.1.2 Analysis Goals, Assumptions, and Approach....47
3.1.3 Measurement Platform....49
3.1.4 The ReTracer Tool....50

3.2 Detecting Inefficient Cross-Layer Interactions 51
3.2.1 How to Read TCP Trace Plots....52
3.2.2 Analysis Goals, Assumptions, and Approach....54
3.2.3 Measurement Platform....55
3.2.4 The MultiTracer Tool 57
3.2.5 Detected “Implementation Bugs” in GSM 58

3.3 Reproducing Inefficient Cross-Layer Interactions 59
3.3.1 Analysis Goals, Assumptions, and Approach....59
3.3.2 Measurement Platform....60
3.3.3 The Hiccup Tool 61

3.4 Analyzing TCP’s Retransmission Timer....62
3.4.1 Choosing a “typical” TCP Connection 62
3.4.2 Model-based Analysis....64
3.4.3 Measurement-based Analysis 64

3.5 Summary....65

Chapter 4 Flow-Adaptive Wireless Links 67

4.1 Extending the Differentiated Service Framework....68
4.1.1 Providing Differentiated Service through Link Layer Error Control 68
4.1.2 Defining Service Classes and Matching Link Layer Adaptations....69
4.1.3 Deployment Concerns and Implementation Alternatives....73
4.1.4 Link Layer Error Recovery Persistency for Fully-Reliable Flows....74

4.2 Real-World Interactions between TCP and RLP....77
4.2.1 Interactions are Rare....77
4.2.2 Excessive Queueing....78
4.2.3 The Impact of RLP Link Resets 80
4.2.4 Competing Error Recovery Only in Pathological Cases 82

4.3 Optimizing Wireless Links for Bulk Data Flows....84
4.3.1 Block Erasure Rates and Burstiness 84
4.3.2 Error Burstiness Allows for Larger Frames....86
4.3.3 The Failure of Pure End-to-End Error Recovery....87

4.4 Summary....90

Chapter 5 TCP-Eifel 91

5.1 Problems of TCP-Lite’s Error Recovery....92
5.1.1 Spurious Timeouts....92
5.1.2 Spurious Fast Retransmits 95

5.2 The Eifel Algorithm 96
5.2.1 Resolving the Retransmission Ambiguity 96
5.2.2 The Sender's Response 97
5.2.3 Performance Evaluation 99
5.3 Problems of TCP-Lite's Retransmission Timer 101
5.3.1 Prediction Flaw when the RTT Drops 102
5.3.2 Failure of the "Magic Numbers" 103
5.3.3 The "REXMT-Restart Bug" 104
5.3.4 Timer Granularity 105
5.3.5 Validating the Model 106
5.4 The Eifel Retransmission Timer 107
5.4.1 Predicting a Decreasing RTT 107
5.4.2 Scaling the Estimator Gains and the Variation Weight 108
5.4.3 Shock Absorbers 110
5.4.4 The RTO Minimum 111
5.4.5 Implementing REXMT Precisely 111
5.4.6 Adapting to Spurious Timeouts 113
5.4.7 Validating the Implementation of RTO-Eifel 115
5.5 Summary 116

Chapter 6 Conclusion 119

Appendix A Glossar 123

Appendix B References 127

B.1 Research Papers and Books 127
B.2 Standards, Recommendations, and Drafts 131
B.3 Software 133
